

Find your first private AI use case *in 2–3 weeks.*

The Readiness Sprint is a short, fixed-scope engagement. We work with your business, IT and risk teams, test the candidate use cases against your real data, and design how a private deployment would run and be governed.

WHAT YOU GET

- Prioritised use-case shortlist, each scored for business value and feasibility
- Data and system map: where the relevant documents and records live, who owns them, and how they can be reached
- Private AI reference architecture for your environment: on-premise, private cloud, or sovereign GCC cloud
- Risk and governance review covering data residency, access control, and human approval points
- Costed roadmap for the pilot and the use cases after it

WHAT WE NEED FROM YOU

- People: an executive sponsor, one business owner for each candidate use case, and named contacts in IT, security, and risk or compliance.
- Time: a kickoff session, interviews of about an hour with each team, and a final readout.
- Access: read-only access to the systems in scope, or a guided walkthrough, under your security rules.
- Documents: sample policies, contracts, forms, or correspondence for each use case, including Arabic and scanned files where they exist.

FROM SPRINT TO PRODUCTION

01

Readiness Sprint

2–3 weeks

We work with your business, IT, and risk teams to find the use cases worth building first. We test each one against your real data and infrastructure, and agree how a private deployment would be governed.

02

Pilot

4–8 weeks

We take the top use case from the shortlist and build it on your infrastructure. It connects to the systems it needs, real staff use it, and we measure it against targets agreed before the build starts.

03

Run & Scale

Monthly

Once the pilot is approved, we operate it as a managed service. We watch quality, keep models and prompts current, and add the next use cases on the same foundation.

The roadmap is yours, whether or not you build with us.
