SEEKERS

CUSTOM AI & AUTOMATION · EGYPT

From a free call to a working system *in weeks.*

We start with one process that costs your team time every day: WhatsApp messages nobody answered, bookings in a notebook, receipts checked by eye. We map it with the people who do it, send a proposal with a fixed scope, then build, launch and run the system with you.

WHAT THE PROPOSAL COVERS

- A step-by-step map of the process as it runs today
- What the system will do, and what stays with your team
- The tools it connects to, such as WhatsApp, Excel, your CRM or calendar
- Which steps go to a person for approval
- The cost of the build and of running it each month

WHAT WE NEED FROM YOU

- People: you or a manager who owns the process, and one or two staff who do it every day.
- Time: the first call, a working session to map the process, and a review before launch.
- Access: the WhatsApp Business number, sheets, CRM or calendar the system will use, under rules you set.
- Examples: real messages, bookings or receipts, with personal details removed where needed.

HOW WE WORK

01

A short call

About 30 min · Free

You tell us where the time goes. We ask about your tools and the one process that costs you the most. If automation won't help you yet, we say so.

02

We map one process

Fixed scope

We go through one real process with the people who do it, step by step: where requests come in, what gets checked, who decides and where work waits. Then we send a fixed-scope proposal.

03

Build & launch

In weeks

We build the system, connect it to your tools and test it on real messages and cases before launch. Your team learns how to use it and how to take over a chat.

04

Run & improve

Every month

After launch we run the system with you. We watch the conversations and results, fix mistakes, adjust it when your business changes and add the next process when you're ready.

If automation won't help you yet, we tell you on the first call.

HOW YOUR DATA STAYS SAFE

- Designed around Egypt's Law 151 of 2020
- A person approves sensitive steps
- Can run on your own servers
